DETAILED ACTION

This Office action is in answer to the amendment filed 10/27/2005. Claims 1-4 are pending, of which claim 3 is amended.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Stuart** [5982143].

Stuart discloses in figures 1-15 an apparatus for regulating state of charge in a battery assembly including a plurality of secondary cells B1-Bn as unit cells which are connected in series [see figures 1 and 2], said apparatus comprising; voltage detecting means 12 for detecting respective voltages across said unit cells, and equalizing means for equalizing the respective voltages across said unit cells by transferring electric charge from the largest unit cell having the largest voltage across the cell to a capacitor CB1-CBN, and thereafter, by transferring the electric charge from said capacitor to the smallest unit cell having the smallest voltage across the cell, wherein said equalizing means transfers the electric charge from said largest unit cell to said capacitor so that the voltage of said capacitor may be made higher than the voltage across said largest unit cell. Stuart discloses a plurality of capacitors CB1-CBN to equalize the charge across the cells.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to make integral the plurality of capacitors in one capacitor in order to minimize the number of components, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routing skill in the art. *In re Larson*, 340 F.2d 965, 968, 144 USPQ 347, 349 (CCPA 1965). See MPEP 2144.04.

Art Unit: 2838

Allowable Subject Matter

3. Claims 3 and 4 are allowed.

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art cited in PTO-892 and not mentioned above disclose related apparatus.
